

# Office Marketplace Application

## DeVono

Black Basil built an office market place application for a real estate firm based out in UK which streamlined the office bookings and increased the revenue for the client by 80% and disrupted the way people book the offices.

### About DeVono

DeVono is a U.K based firm Office Space & Commercial Property Consultants. Supporting businesses across the UK & Internationally. DeVono acquired UPMO which was originally built for streamlining office market place

### Challenge

- Lack of a platform where people can book office for short term and long term without the hassle.
- There are lot of options but people don't know which one is best suited for them
- People don't have transparency on pricing which makes decision making difficult

### Solution

- Developed an office market web application using serverless architecture.
- This application allowed users to search the offices efficiently and provided key information about the offices.
- People could create appointments to view the office physically and The booking was made seamless and hassle free

### Platform Built

Black Basil built a web application using Vue.js for UI and AWS Functions for backend and DynamoDB for data store.

It leverages Algolia for search and Google map API for visualizing office locations on the map.

For more details see the open architecture.

### Key Results

- Easy and streamlined office booking for short term and long term both.
- The revenue from commission increased by 80%.
- More people engaged with DeVono and it became more trusted real-estate company.

**Wisen Ianasa**  
CTO, UPMO

Black Basil was engaged to contribute to our office marketplace application and their consultants contributed to the application since the day they were onboarded. They became an integral part of the team, contributing quickly to shipping our front-end features and, most significantly, the integration to Google Maps.
